

Objectives

- 1 - To become familiar with ENR and other engineering publications.
- 2 - To recognize some applications of Soils & Foundations

To Do

Find and review an issue of *Engineering News Record* or other engineering publication. Locate an article that illustrates a principal, a problem, or an application of soil mechanics or foundations engineering. Some articles may be shared with the class and you may be called upon to discuss the article.

Prepare a written report that will point out how soil mechanics and/or foundations engineering entered into some civil engineering project.

If no article is found in an issue of ENR, refer to a copy of *Foundation Engineering* or *Geotechnical Fabrics Report*.
